INDUSTRIAL

Industrial applications are well suited for FabricAir ducts. The duct is typically high off the ground, the structure is exposed, and large volumes of air are typically required. FabricAir ducts can provide the required long throws. The installation is easy because of the exposed structure, and the cost savings are significant because of the large volumes of air required.

BENEFITS

- ✓ A versatile system design
- ✓ Corrosion resistant
- ✓ The entire fabric air duct is an air diffuser

“

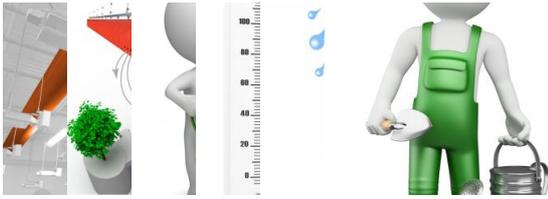

Would I recommend FabricAir to others? Oh yeah, absolutely!

I have a pool project right now and I wouldn't mind seeing the fabric ducting in there. The thing about pools are: we deal with chlorine which is very corrosive. In this project we have to go with aluminum, which is a lot more expensive. I'd much rather see FabricAir ducting; especially a different color than

gray - maybe blue or red. We are doing it in Genesis. The project would be perfect for this fabric ducting - a whole field house.

Richard Deveau

Project Manager, Marlborough, Sheet Metal & Design Ltd.

Improving the climate in production facilities is important for increasing productivity and reducing costs. Controlling humidity and air quality is crucial for preventing mold and ensuring the health and safety of workers. FabricAir provides a range of products to help you achieve these goals.

■ MOST POPULAR PRODUCTS

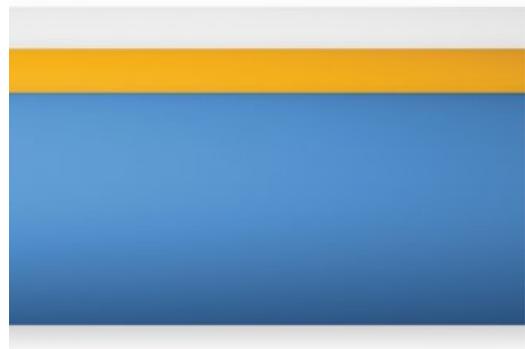

The products listed below are only a suggestion; FabricAir has many fabric types and flow models. Please contact us for the best solution to your application and needs.

■ COMBI 85

The fabric is non-permeable and comes with a 10 year warranty.

NOZZFLOW™

NozzFlow™ is used in applications where very precise directional airflow is needed. The discharge coefficient is almost at unity due to the shape of the nozzle.

[Read more](#) | [Show all flow models](#)

JETFLOW™

JetFlow™ is capable of generating exceptionally long throws through the use of conical jets in varying diameters. The jets have a very high discharge coefficient due to the conical shape.

TYPE 8 / AIO + 360° + VARIO

Type 8 H-rail suspension is a method of suspending FabricAir ducts. The H-rail, so named because it looks like an H in the cross section, is made out of anodized aluminum, making it an excellent choice for corrosive environments.
